

Agile Development Cheatsheet

Priority: 10 highest, 50 lowest (High, Medium, or Low is acceptable)
Helps when you're running out of time. Lower priorities can be dropped or edited, but ugh priorities have to happen.

Estimate: How many work days do you think this task will take?
Discuss with teammates. How will you guys implement it? Who has experience with that skill? Will you need to do a lot of research? Figure out *why* you think it will take x days and discuss until you all agree on an estimate.

Iteration 1: Baseline

User Stories that HAVE to happen to consider your project a success

See Current Temperature

User Story 2

User Story 3

As a user, **I want** to see
the temperature in my
house **so that** I can
monitor it.

Priority: High
Estimate: 5 days

Iteration 2

User stories that may still be important, but your project can function without them.

User Story 1

User Story 2

User Story 3
